

u.v light is used to sterilize :

- 
- 
- 
- 

-None of the above

e

which of the following viruses are susceptible to bacitracin?  
correct answer: streptococci group A

which of the following viral component has the same genomic physical properties and polarity in all viruses?

- a) RNA
- b) dNA
- c) Capsid
- d) Envelope
- e) Helical

E

Which of the following viral components has the most variety (complexity) ?

- a) Envelope
- b) Capsid
- c) glyco spikes
- d) Genome

c or d

All of the following viruses contains RNA replicative intermediate except:

- a) reo
- b) herpes
- c) HIV

c

Which of the following has a reverse transcriptase :

HBV

msh mtzakreh el so2al bs eshe eno el capsid represents a small portion of the genome , azon hay el jomleh ghalat

Which of the following inhibits DNA gyrase :

Fluoroquinolones

Flagella are mostly made up of :

- a) Protein
- b) Polysaccharides
- c) Both a and b

a

Pasteurization :

- a) Kills most pathogens
- b) Heating to 63 followed by cooling to 30
- c) Both a and b

c

Which of the following is bacitracin sensitive:

Streptococcus A

One of the following is not caused by corynebacterium diptheria:

- a) endo carditis
- b) Meningitis
- c) Obstruction of the airways

b

Which of the following is considered of the oral flora : Viridians

what attaches to 30s eljawab kan teracyclin w aminoglycoside

all of the following is considered as detergents for culture media EXCEPT (mo detergent , el so2al eno est5dm fl culture of gram bacteria)

- a) Alcohol
- b) Iodine
- c) hypochlorite
- d) crystal violate

c

What casues puerperal pregnancy :

Strep B

Which of the following is not a function of viral envelopes:

- a) Morphogenesis
- b) Assembly
- c) Uncoating

a or b

which is wrong about initial phase in virus replication ?

- a) antiviral can't work on it ( bmsnaha )
- b) attachment is energy independent
- c) virus partially loses its affinity to the receptor if it detaches

a

all the following associated with coagulase + ve Staphylococcus

- a) S.aureus
- b) catalase +ve
- c) in culture , give yellow to red
- d) a and b
- e) all of the above

e

which of the following isn't susceptible to Beta-lactamase

- a) Oxacillin
- b) lincomycin
- c) cephalothin

a or b

Which of the following other than HIV carries a reverse transcriptase:  
Hepatitis B (hepadna virus)

- Most Viruses are
- A)Active extracellular
- lack polymerases
- C)enveloped
- D)replicate efficiently

b or d
